Retropole Double Head Adaptor

The **retropole** Light Lowering System is designed to preserve the aesthetics of the existing fixture and property. Retropole's two head adaptor offers the financial benefits of lowering two heads without the cost of two separate lowering systems.

Before Installing Retropole the following conditions need to be confirmed:

- 1.) Fixtures will need to be moved approximately 6 inches to accommodate space for the lowering system.
- 2.) The weight of both fixtures can not exceed 100 lbs.
- 3.) Only 180° fixture configuration is currently available.
- 4.) Illumination and Photometrics should rarely change after the installation of **retropole**, if at all.
