Pre-Shipping Customer Checklist

Job Name: _____ **Location:** _____

Please Initial Every Item:

- _____ Fixture(s) weight does not exceed the 100 lbs rated maximum load.
- _____ No more than two Fixtures can be installed using a 180° double head adapter against one rail unit.
- _____ Electrical contacts are rated for up to 480 volts and 15 amps.
- _____ If the width of the pole is wider than 8" it will require an additional handle extension. Round and round tapered poles will need box stabilizer blocks.
- _____ Any modifications should be done to the existing pole and light head and not to **retropole**. Any modifications to the **retropole** unit could affect the structural integrity.
- _____ Installing retropole within 50 miles of coastlines/salt water will require an upgraded stainless steel component.
- _____ The existing pole condition is imperative for structural integrity. The pole should be at least 7-gauge steel and visually inspected for rust, physical damage or any other condition that could affect structural integrity.
- _____ Electrical and lighting work is inherently dangerous. Please follow all applicable OSHA guidelines when installing or operating **retropole** or any other electrical lighting device.
- _____ Installation performed by untrained or non-certified **retropole** vendors will be supported Monday through Friday business hours by phone or email if prior notification has been approved. Non-certified installations are not covered under **retropole's** warranty or insurance.
- _____ retropole's vertical path of mobility must be clear of all obstructions.

Your Initials are acceptance without modifications of the terms and conditions of which are required by **retropole**. All of the terms in this form are very important, so you must read and agree to this entire document. Failure to adhere to these guidelines will void **retropole's** warranty and liability insurance coverage.
